BIOELECTROCHEMISTRY AND BIOENERGETICS

Subject Index of Volume 44

AC-electric fields
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261
Ac-field
Tumor necrosis factor α and interferon γ production by human peripheral blood mononuclear cells exposed in vitro to sinusoidal 50 Hz magnetic fields (Petrini et al.) 121
Alternating electric field
Stimulation of tobacco shoot regeneration by alternating weak electric field (Cogalniceanu et al.) 257
Amino acid structure
A correlation between the genetic code and the structure and electrical properties of bio amino acids (Pastushenko, Pastushenko) 23
Ammonia sensor
Detection and analysis of the temperature-dependent growth characteristics of *Proteus mirabilis* using a bulk acoustic wave ammonia sensor (Tan et al.) 83
Ampullosporin
Differences in ion permeability of an artificial bilayer membrane caused by ampullosporin and bergofungin, new 15-membered peptaibol-type antibiotics (Grigoriev et al.) 155
Apical ionic permeabilities
The cell model of the electrolyte transport mechanisms for cultured human colonocytes. Electromotive forces of the cellular pathways (Movileanu) 169
Artesunate
Artesunate interaction with hemin (Chen et al.) 295
Artificial bilayer
Differences in ion permeability of an artificial bilayer membrane caused by ampullosporin and bergofungin, new 15-membered peptaibol-type antibiotics (Grigoriev et al.) 155
ATP
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227
Azotobacter vinelandii
Spectroelectrochemical investigation of *Azotobacter vinelandii* bacterial ferritin (Huang et al.) 301

Bacteria
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103
Bacterial ferritin
Spectroelectrochemical investigation of *Azotobacter vinelandii* bacterial ferritin (Huang et al.) 301
Bacteriorhodopsin
Optical and electrical properties of bacteriorhodopsin Langmuir-Blodgett films: II. D96N mutant and its 4-keto and 9-demethyl retinal analogs (Weetall et al.) 37
Basolateral Na^+/H^+ exchanger
The cell model of the electrolyte transport mechanisms for cultured human colonocytes. Electromotive forces of the cellular pathways (Movileanu) 169
Bergofungin
Differences in ion permeability of an artificial bilayer membrane caused by ampullosporin and bergofungin, new 15-membered peptaibol-type antibiotics (Grigoriev et al.) 155
Binding
Bioelectrochemical effectiveness of low intensity acoustic exposure on ligand binding (Tommasi et al.) 215
Bioassay
Cyclic voltammetry and bioassay of some superoxide dismutase mimetic copper complex compounds (Labuda et al.) 31
Biofuel cell
A biofuel cell based on pyrroloquinoline quinone and microperoxidase-11 monolayer-functionalized electrodes (Willner et al.) 209
BLM
A study of reconstituted anion channels using lipid bilayers (Tripathy et al.) 183
Blood
The new approaches to electrochemical investigations of blood components (Shapoval et al.) 289
Blood cells
Tumor necrosis factor α and interferon γ production by human peripheral blood mononuclear cells exposed in vitro to sinusoidal 50 Hz magnetic fields (Petrini et al.) 121
Bulk acoustic wave
Detection and analysis of the temperature-dependent growth characteristics of *Proteus mirabilis* using a bulk acoustic wave ammonia sensor (Tan et al.) 83

Ca-channels
Ca^{2+} induced $Fe(CN)_6^{3-/4-}$ electron transfer at Pt supported BLM electrode (Jiang et al.) 285
Ca^{2+} complex
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227
Capacitance characteristics
Capacitance characteristics of self-assembled monolayers on gold electrode (Krysiński, Brzostowska-Smolska) 163
Catalyzed reduction
Artesunate interaction with hemin (Chen et al.) 295
Cell labeling
Two experimental systems for exposure of cells to extremely low frequency electric fields suitable for in situ measurements of fluorescence signals (Sontag) 141
Cell model
The cell model of the electrolyte transport mechanisms for cultured human colonocytes. Electromotive forces of the cellular pathways (Movileanu) 169

Cell proliferation
Changes in cell proliferation due to environmental non-ionizing radiation 2. Microwave radiation (Kwee, Raskmark) 251
Channel formation
Differences in ion permeability of an artificial bilayer membrane caused by ampullosporin and bergofungin, new 15-membered peptaibol-type antibiotics (Grigoriev et al.) 155
Chemically modified electrode
Direct electrochemistry of membrane-entrapped horseradish peroxidase. Part I. A voltammetric and spectroscopic study (Ferri et al.) 177
Chemiluminescence
Lucigenin-derived chemiluminescence in *Saccharomyces cerevisiae* (Galutzov, Ganeva) 77
Chloride channel
A study of reconstituted anion channels using lipid bilayers (Tripathy et al.) 183
Chloride secretion
The cell model of the electrolyte transport mechanisms for cultured human colonocytes. Electromotive forces of the cellular pathways (Movileanu) 169
Chlorophyll content
Raphanus sativus and electromagnetic fields (Potts et al.) 131
Chloroplast
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Chondrocyte culture
^{35}S–sulfate incorporation into bovine articular chondrocyte explant cultures An attempt at replication (Ishida-Jones, Phillips) 127
Chronopotentiometry
Chronopotentiometric study of electroenzymatic processes with homogeneous mediation (Ciureanu, Goldstein) 65
c-*myc*
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
Copper complexes
Cyclic voltammetry and bioassay of some superoxide dismutase mimetic copper complex compounds (Labuda et al.) 31
Correlation
A correlation between the genetic code and the structure and electrical properties of bio amino acids (Pastushenko, Pastushenko) 23
Cultured cells
Intermittent noise affects EMF-induced ODC activity (Mullins et al.) 237
Cyclic voltammetry
Electrochemical behaviors of DNA at mercury film electrode (Wu et al.) 151
Capacitance characteristics of self-assembled monolayers on gold electrode (Krysiński, Brzostowska-Smolska) 163
Direct electrochemistry of membrane-entrapped horseradish peroxidase. Part I. A voltammetric and spectroscopic study (Ferri et al.) 177
Artesunate interaction with hemin (Chen et al.) 295
Cysteamine monolayer
Electrocatalytical oxidation of NADH with dopamine covalently bound to self-assembled cysteamine monolayers on a gold electrode (Sun et al.) 45
Cytosensor
Voltammetric behavior of living cells *T. shanghaiensis* and its bioanalytical application (Feng et al.) 89

Degradation
Electrochemical behaviors of DNA at mercury film electrode (Wu et al.) 151
Denitrification
Electrostimulation of proliferation of the denitrifying bacterium *Pseudomonas stutzeri* (Hönes et al.) 275
1,3-dimethyluric acid
Comparison of electrochemical and enzymic oxidation of 1,3-dimethyluric acid (Goyal, Singhal) 201
DNA
Electrochemical behaviors of DNA at mercury film electrode (Wu et al.) 151
Dopamine
Electrocatalytical oxidation of NADH with dopamine covalently bound to self-assembled cysteamine monolayers on a gold electrode (Sun et al.) 45

Electrical model
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Electrical properties
A correlation between the genetic code and the structure and electrical properties of bio amino acids (Pastushenko, Pastushenko) 23
Electric field
AC fields of low frequency and amplitude stimulate pollen tube growth possibly via stimulation of the plasma membrane proton pump (Plätzer et al.) 95
Electroactive disulfide bonds
The reduction of disulfide bonds in proteins at mercury electrodes (Honeychurch) 13
Electrocatalysis
Electrocatalytical oxidation of NADH with dopamine covalently bound to self-assembled cysteamine monolayers on a gold electrode (Sun et al.) 45
A biofuel cell based on pyrroloquinoline quinone and microperoxidase-11 monolayer-functionalized electrodes (Willner et al.) 209
Electrochromism
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Electroenzymatic processes
Chronopotentiometric study of electroenzymatic processes with homogeneous mediation (Ciureanu, Goldstein) 65
Electrofusion
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227
Electrofusion yield
Electrofusion of protoplasts modified by protein adsorption (Yu, Berg) 233
Electrogenesis
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Electromagnetic (EM) field exposures
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
Electromagnetic fields
Intermittent noise affects EMF-induced ODC activity (Mullins et al.) 237
Changes in cell proliferation due to environmental non-ionizing radiation 2. Microwave radiation (Kwee, Raskmark) 251
Electron–tunnel–heme and kinetics of iron release
Spectroelectrochemical investigation of *Azotobacter vinelandii* bacterial ferritin (Huang et al.) 301
Electrooxidation
Comparison of electrochemical and enzymic oxidation of 1,3-dimethyluric acid (Goyal, Singhal) 201
Electropermeabilization
Lucigenin-derived chemiluminescence in *Saccharomyces cerevisiae* (Galutzov, Ganeva) 77
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103

Electroporation
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227
Electrostimulation
Stimulation of tobacco shoot regeneration by alternating weak electric field (Cogalniceanu et al.) 257
Primary root growth rate of *Zea mays* seedlings grown in an alternating magnetic field of different frequencies (Muraji et al.) 271
Electrostimulation of proliferation of the denitrifying bacterium *Pseudomonas stutzeri* (Hönes et al.) 275
Electrotransformation
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103
ELF apparatus
Two experimental systems for exposure of cells to extremely low frequency electric fields suitable for in situ measurements of fluorescence signals (Sontag) 141
EMF
Raphanus sativus and electromagnetic fields (Potts et al.) 131
Endoplasmic reticulum (ER)
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261
Enzymic oxidation
Comparison of electrochemical and enzymic oxidation of 1,3-dimethyluric acid (Goyal, Singhal) 201
Ethidiumbromide complex
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227

Fe $(CN)_6^{3-/4-}$ electron transfer
Ca^{2+} induced $Fe(CN)_6^{3-/4-}$ electron transfer at Pt supported BLM electrode (Jiang et al.) 285
Fluorescence analysis
Two experimental systems for exposure of cells to extremely low frequency electric fields suitable for in situ measurements of fluorescence signals (Sontag) 141
Frequency dependence
Primary root growth rate of *Zea mays* seedlings grown in an alternating magnetic field of different frequencies (Muraji et al.) 271

Garden cress
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261
Genetic code
A correlation between the genetic code and the structure and electrical properties of bio amino acids (Pastushenko, Pastushenko) 23
Glucose-glucose oxidase
Chronopotentiometric study of electroenzymatic processes with homogeneous mediation (Ciureanu, Goldstein) 65
Gold electrode
Electrocatalytical oxidation of NADH with dopamine covalently bound to self-assembled cysteamine monolayers on a gold electrode (Sun et al.) 45
Growth
Raphanus sativus and electromagnetic fields (Potts et al.) 131
Growth curves
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111

H^+-ATPase
AC fields of low frequency and amplitude stimulate pollen tube growth possibly via stimulation of the plasma membrane proton pump (Plätzer et al.) 95
Hemin
Artesunate interaction with hemin (Chen et al.) 295
HL60 cells
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
HL-60 cells
Two experimental systems for exposure of cells to extremely low frequency electric fields suitable for in situ measurements of fluorescence signals (Sontag) 141
Homogeneous mediation
Chronopotentiometric study of electroenzymatic processes with homogeneous mediation (Ciureanu, Goldstein) 65
Horseradish peroxidase
Direct electrochemistry of membrane-entrapped horseradish peroxidase. Part I. A voltammetric and spectroscopic study (Ferri et al.) 177
Human colon epithelial cells
The cell model of the electrolyte transport mechanisms for cultured human colonocytes. Electromotive forces of the cellular pathways (Movileanu) 169
Hydroxyl radicals
The new approaches to electrochemical investigations of blood components (Shapoval et al.) 289

Immobilised cytochrome *c*
Covalently immobilised cytochrome *c* imaged by in situ scanning tunnelling microscopy (Andersen et al.) 57
Inductive electrostimulation
Can a 50 Hz electromagnetic field influence the preintegrative steps of replication of a murine retrovirus responsible for leukemia/lymphoma? (Piéroni et al.) 279
Interferon γ
Tumor necrosis factor α and interferon γ production by human peripheral blood mononuclear cells exposed in vitro to sinusoidal 50 Hz magnetic fields (Petrini et al.) 121
Interferon release
Electromagnetic fields enhance the release of both interferon γ and interleukin-6 by peripheral blood mononuclear cells after phytohaemagglutinin stimulation (Aldinucci, Pessina) 243
Interleukin release
Electromagnetic fields enhance the release of both interferon γ and interleukin-6 by peripheral blood mononuclear cells after phytohaemagglutinin stimulation (Aldinucci, Pessina) 243
Intermediates
The new approaches to electrochemical investigations of blood components (Shapoval et al.) 289
Internal standard
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
In vitro shoot regeneration
Stimulation of tobacco shoot regeneration by alternating weak electric field (Cogalniceanu et al.) 257
In vitro studies
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
Ion cyclotron resonance
Primary root growth rate of *Zea mays* seedlings grown in an alternating magnetic field of different frequencies (Muraji et al.) 271
Ionophoric acitivities
Differences in ion permeability of an artificial bilayer membrane caused by ampullosporin and bergofungin, new 15-membered peptaibol-type antibiotics (Grigoriev et al.) 155
Ion-substitution experiments
The cell model of the electrolyte transport mechanisms for cultured human colonocytes. Electromotive forces of the cellular pathways (Movileanu) 169
Irreversibility
Voltammetric behavior of living cells *T. shanghaiensis* and its bioanalytical application (Feng et al.) 89

Isoelectric point
Electrofusion of protoplasts modified by protein adsorption (Yu, Berg) 233

La^{3+} complex
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227
Langmuir-Blodgett films
Optical and electrical properties of bacteriorhodopsin Langmuir-Blodgett films: II. D96N mutant and its 4-keto and 9-demethyl retinal analogs (Weetall et al.) 37
Lepidium sativum (L.)
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261
Leukemia
Can a 50 Hz electromagnetic field influence the preintegrative steps of replication of a murine retrovirus responsible for leukemia/lymphoma? (Piéroni et al.) 279
Ligand
Bioelectrochemical effectiveness of low intensity acoustic exposure on ligand binding (Tommasi et al.) 215
Lipid bilayer membrane
Ca^{2+} induced $Fe(CN)_6^{3-/4-}$ electron transfer at Pt supported BLM electrode (Jiang et al.) 285
Liposomes
A study of reconstituted anion channels using lipid bilayers (Tripathy et al.) 183
Lucigenin
Lucigenin-derived chemiluminescence in *Saccharomyces cerevisiae* (Galutzov, Ganeva) 77
Lymphocytes
Electromagnetic fields enhance the release of both interferon γ and interleukin-6 by peripheral blood mononuclear cells after phytohaemagglutinin stimulation (Aldinucci, Pessina) 243
The new approaches to electrochemical investigations of blood components (Shapoval et al.) 289

Macrocyclic ligands
Cyclic voltammetry and bioassay of some superoxide dismutase mimetic copper complex compounds (Labuda et al.) 31
Magnetic pulsation
^{35}S–sulfate incorporation into bovine articular chondrocyte explant cultures An attempt at replication (Ishida-Jones, Phillips) 127
Mammalian cells
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103
Membrane electrofusion
Electrofusion of protoplasts modified by protein adsorption (Yu, Berg) 233
Mercury film electrode
Electrochemical behaviors of DNA at mercury film electrode (Wu et al.) 151
Microelectrode
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Microperoxidase-11
A biofuel cell based on pyrroloquinoline quinone and microperoxidase-11 monolayer-functionalized electrodes (Willner et al.) 209
Microtiter plate culture
Changes in cell proliferation due to environmental non-ionizing radiation 2. Microwave radiation (Kwee, Raskmark) 251
Microwave radiation
Changes in cell proliferation due to environmental non-ionizing radiation 2. Microwave radiation (Kwee, Raskmark) 251
Monolayer-electrode
A biofuel cell based on pyrroloquinoline quinone and microperoxidase-11 monolayer-functionalized electrodes (Willner et al.) 209
mRNA
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
Murine lymphocytes
Can a 50 Hz electromagnetic field influence the preintegrative steps of replication of a murine retrovirus responsible for leukemia/lymphoma? (Piéroni et al.) 279
Murine retrovirus
Can a 50 Hz electromagnetic field influence the preintegrative steps of replication of a murine retrovirus responsible for leukemia/lymphoma? (Piéroni et al.) 279

NADH
Electrocatalytical oxidation of NADH with dopamine covalently bound to self-assembled cysteamine monolayers on a gold electrode (Sun et al.) 45
NADH oxidation
A biofuel cell based on pyrroloquinoline quinone and microperoxidase-11 monolayer-functionalized electrodes (Willner et al.) 209
Northern and dot blot hybridization
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
Nucleic acids
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227

Octadecanethiol model
Capacitance characteristics of self-assembled monolayers on gold electrode (Krysiński, Brzostowska-Smolska) 163
Ornithine decarboxylase
Intermittent noise affects EMF-induced ODC activity (Mullins et al.) 237
Oxygen reduction
The new approaches to electrochemical investigations of blood components (Shapoval et al.) 289

P515
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Patch-clamp
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Permeability
A study of reconstituted anion channels using lipid bilayers (Tripathy et al.) 183
Photo currents
Optical and electrical properties of bacteriorhodopsin Langmuir-Blodgett films: II. D96N mutant and its 4-keto and 9-demethyl retinal analogs (Weetall et al.) 37
Photosynthesis
Electrogenesis in the photosynthetic membrane: fields, facts and features (Vredenberg) 1
Phytohaemoglutinin stimulation
Electromagnetic fields enhance the release of both interferon γ and interleukin-6 by peripheral blood mononuclear cells after phytohaemagglutinin stimulation (Aldinucci, Pessina) 243
Planar lipid bilayer
A study of reconstituted anion channels using lipid bilayers (Tripathy et al.) 183
Plant cells
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103

Plant root
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261
Plasma membrane, Pollen
AC fields of low frequency and amplitude stimulate pollen tube growth possibly via stimulation of the plasma membrane proton pump (Plätzer et al.) 95
Plasmids
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103
Polynucleotides
Electroporation and fusion modified by nucleic acids and complexes (Yu, Berg) 227
Primary root
Primary root growth rate of *Zea mays* seedlings grown in an alternating magnetic field of different frequencies (Muraji et al.) 271
Protein adsorption
Electrofusion of protoplasts modified by protein adsorption (Yu, Berg) 233
Protein entrapment
Direct electrochemistry of membrane-entrapped horseradish peroxidase. Part I. A voltammetric and spectroscopic study (Ferri et al.) 177
Protein modified electroporation
Electrofusion of protoplasts modified by protein adsorption (Yu, Berg) 233
Protein surface excess
The reduction of disulfide bonds in proteins at mercury electrodes (Honeychurch) 13
Proteus mirabilis
Detection and analysis of the temperature-dependent growth characteristics of *Proteus mirabilis* using a bulk acoustic wave ammonia sensor (Tan et al.) 83
Protonophoric differences
Differences in ion permeability of an artificial bilayer membrane caused by ampullosporin and bergofungin, new 15-membered peptaibol-type antibiotics (Grigoriev et al.) 155
Pseudomonas stutzeri
Electrostimulation of proliferation of the denitrifying bacterium *Pseudomonas stutzeri* (Hönes et al.) 275
Purple membranes
Optical and electrical properties of bacteriorhodopsin Langmuir-Blodgett films: II. D96N mutant and its 4-keto and 9-demethyl retinal analogs (Weetall et al.) 37
Pyrroloquinoline quinone
A biofuel cell based on pyrroloquinoline quinone and microperoxidase-11 monolayer-functionalized electrodes (Willner et al.) 209

Radiofrequency electromagnetic fields
Changes in cell proliferation due to environmental non ionizing radiation 2. Microwave radiation (Kwee, Raskmark) 251
Radish
Raphanus sativus and electromagnetic fields (Potts et al.) 131
Reactive oxygen species
Cyclic voltammetry and bioassay of some superoxide dismutase mimetic copper complex compounds (Labuda et al.) 31
Receptor
Bioelectrochemical effectiveness of low intensity acoustic exposure on ligand binding (Tommasi et al.) 215
Redox potential
Cyclic voltammetry and bioassay of some superoxide dismutase mimetic copper complex compounds (Labuda et al.) 31
Reduction potential
Spectroelectrochemical investigation of *Azotobacter vinelandii* bacterial ferritin (Huang et al.) 301
Replication differences
^{35}S–sulfate incorporation into bovine articular chondrocyte explant cultures An attempt at replication (Ishida-Jones, Phillips) 127
Root cap cells (statocytes)
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261
Root growth
Weak AC-electric fields promote root growth and ER abundance of root cap cells (Stenz et al.) 261

Schoolfield model
Detection and analysis of the temperature-dependent growth characteristics of *Proteus mirabilis* using a bulk acoustic wave ammonia sensor (Tan et al.) 83
Self-assembled monolayer
Capacitance characteristics of self-assembled monolayers on gold electrode (Krysiński, Brzostowska-Smolska) 163
Sham/sham controls
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
Solenoid exposure
Electromagnetic fields enhance the release of both interferon γ and interleukin-6 by peripheral blood mononuclear cells after phytohaemagglutinin stimulation (Aldinucci, Pessina) 243
Specific absorption rate values
Changes in cell proliferation due to environmental non-ionizing radiation 2. Microwave radiation (Kwee, Raskmark) 251
Spectra and mediatorless
Spectroelectrochemical investigation of *Azotobacter vinelandii* bacterial ferritin (Huang et al.) 301
Stark effect
Bioelectrochemical effectiveness of low intensity acoustic exposure on ligand binding (Tommasi et al.) 215
ST microscopy
Covalently immobilised cytochrome *c* imaged by in situ scanning tunnelling microscopy (Andersen et al.) 57
Sulfate incorporation
^{35}S–sulfate incorporation into bovine articular chondrocyte explant cultures An attempt at replication (Ishida-Jones, Phillips) 127
Superoxide dismutase
Cyclic voltammetry and bioassay of some superoxide dismutase mimetic copper complex compounds (Labuda et al.) 31

Thiotepa-DNA interactions
Electrochemical study of antineoplastic drug thiotepa hydrolysis to thiol form and thiotepa–DNA interactions (Marín et al.) 51
Thiotepa electrochemistry
Electrochemical study of antineoplastic drug thiotepa hydrolysis to thiol form and thiotepa–DNA interactions (Marín et al.) 51
Thiotepa hydrolysis
Electrochemical study of antineoplastic drug thiotepa hydrolysis to thiol form and thiotepa–DNA interactions (Marín et al.) 51
Tip growth
AC fields of low frequency and amplitude stimulate pollen tube growth possibly via stimulation of the plasma membrane proton pump (Plätzer et al.) 95
Tobacco
Stimulation of tobacco shoot regeneration by alternating weak electric field (Cogalniceanu et al.) 257
TPA induction
Biological and technical variables in *myc* expression in HL60 cells exposed to 60 Hz electromagnetic fields (Jin et al.) 111
T. shanghaiensis
Voltammetric behavior of living cells *T. shanghaiensis* and its bioanalytical application (Feng et al.) 89

Tumor necrosis factor
Tumor necrosis factor α and interferon γ production by human peripheral blood mononuclear cells exposed in vitro to sinusoidal 50 Hz magnetic fields (Petrini et al.) 121

Ultrasound
Bioelectrochemical effectiveness of low intensity acoustic exposure on ligand binding (Tommasi et al.) 215

UV-spectroelectrochemistry
Artesunate interaction with hemin (Chen et al.) 295

Video-imaging systems
Two experimental systems for exposure of cells to extremely low frequency electric fields suitable for in situ measurements of fluorescence signals (Sontag) 141

Voltammetric behavior
Voltammetric behavior of living cells *T. shanghaiensis* and its bioanalytical application (Feng et al.) 89

Yeast
Lucigenin-derived chemiluminescence in *Saccharomyces cerevisiae* (Galutzov, Ganeva) 77
Electrotransformation pathways of procaryotic and eucaryotic cells: recent developments (Eynard et al.) 103

Zea mays
Primary root growth rate of *Zea mays* seedlings grown in an alternating magnetic field of different frequencies (Muraji et al.) 271
